#### 四、閱讀測驗

(一) In many of the developing countries in Africa and Asia, the population is growing fast. The reason for this is simple: Women in these countries have a high birth rate – from 3.0 to 7.0 children per woman. The majority of these women are poor, without the food or resources to care for their families. Why do they have many children? Why don't they limit the size of their families? The answer may be that they often have no choice. There are several reasons for this.

One reason is economic. In a traditional agricultural economy, large families are helpful. Having more children means having more workers in the fields and someone to take care of the parents in old age. In an industrial economy, the situation is different. Many children do not help a family; instead, they are an expense. Thus, industrialization has generally brought down the birth rate. This was the case in Italy, which was industrialized quite recently and rapidly. In the early part of the twentieth century, Italy was a poor, largely agricultural country with a high birth rate. After World War II, Italy's economy was rapidly modernized and industrialized. By the end of the century, the birth rate had dropped to 1.3 children per woman, the world's lowest.

However, the economy is not the only important factor that influences birth rate. Saudi Arabia, for example, does not have an agriculture-based economy, and it has one of the highest per capita incomes in the world. Nevertheless, it also has a very high birth rate (7.0). Mexico and Indonesia, on the other hand, are poor countries, with largely agricultural economies, but they have recently reduced their population growth.

 ① Economy may or maynot influence birth rate.  
 ② Women are poor in developing countries.

(二) One of the keys to the success of Toyota's lean production and continuing improvement processes is that they are not formulaic to the point that they limit employee innovation. Instead, they are quite the opposite, serving as guides designed to unleash previously untapped employee potential. In Toyota, principles should remain the same but methods for reaching objectives should constantly change: What works today can always be improved upon. Therefore, a central element of maintaining the same culture at Toyota year after year is encouraging employees to find different and new ways of contributing.

Many who study Toyota's way of working are often initially surprised at the lack of specific, step-by-step, how-to instructions. But the Toyota culture is intended to draw upon the creative abilities of employees; if the processes were put into a manual featuring steps 1, 2 and 3, then people would likely follow the steps robotically, doing their job each day precisely the same way they did it the day before. The Toyota system is teaching people to think for themselves and find a better way to do the job, and to take individual ownership.
