請依下文回答第 37 題至第 41 題：

American technology companies once led the way in developing innovative products and services. But today many big tech firms seem to have lost their innovation mojo. In 1970, IBM _____ 37 _____ the world's first interchangeable family of computers, the revolutionary System/360 mainframes. It was a _____ 38 _____ bet on innovation that *Fortune* magazine at the time called "IBM's \$5 billion gamble." In today's money, that's the _____ 39 _____ of a \$40 billion wager on innovation—one that incidentally required IBM to cannibalize all its existing revenue-producing product lines. But the bet worked. The System/360 line quickly became the _____ 40 _____ mainframe in the market and the de facto industry standard, ensuring IBM's supremacy in the industry for a generation to come. Back then, it was an axiom of business leadership that today's investments in R&D lead to tomorrow's _____ 41 _____ and profits. But today, this ancient wisdom is in danger of being lost.

請依下文回答第 42 題至第 45 題：

"From an evolutionary point of view, we typically don't think of the nose as very important," said Dr. Gary Schwartz, professor of psychiatry and psychology at the University of Arizona. "But it is stuck square in the middle of the face. Why would something that was less relevant to normal activities be so prominent? It implies there is something more important there than we have realized."

Indeed, scientists are learning that fragrance affects us more than previously thought. New research indicates that smells influence our minds, our moods and our bodies. Although we know a great deal about the eyes and ears, we only partly understand smell. According to Charles Wysocki, an olfactory scientist at the Monell Chemical Senses Center in Philadelphia, we do know that an odor is first detected by the olfactory epithelium, a sort of receptor sheet located in the nose. This starts a chain of events that leads to an information flow to the olfactory bulb and limbic system of the brain, which plays a key role in regulating body functions and the emotions. Some of the most significant new findings about smell show that scents can keep people more alert and improve performance of a routine task. *Subjects* tackled a 40-minute vigilance test, which required them to watch a video screen and press a button whenever a certain line pattern appeared. While performing the task, some were intermittently given a whiff of peppermint or lily of the valley through oxygen masks. Scientists discovered that those workers receiving the fragrances performed 25% better than those given only whiffs of pure air. Although it isn't clear exactly how fragrance works, it is believed that this finding may soon have practical applications. Truck drivers, even passenger car drivers, who need to keep alert while traveling long distances, could find it helpful.

- 42 Which is the main idea of this passage?
(A) Fragrance affects people and smells influence our minds and moods.
(B) The nose stuck in the middle of the face is more important than eyes and ears.
(C) Truck drivers can receive fragrance to keep alert whiling traveling long distances.
(D) Workers given a whiff of peppermint perform better than those given only pure air.

- 43 Where is the olfactory bulb located?
(A) In the nose (B) In the brain (C) In the ears (D) In the heart
- 44 According to the passage, what are some of the significant new findings about smell?
(A) Olfactory epithelium is a sort of receptor sheet located in the nose.
(B) From an evolutionary point of view, the nose is not considered very important.
(C) Scents can keep people more attentive and improve performance of a routine task.
(D) Limbic system of the brain plays a key role in regulating body functions and emotions.
- 45 What does the word *subjects* refer to in the sentence “*Subjects* tackled a 40-minute vigilance test”?
(A) Courses (B) Topics (C) People (D) Activities

請依下文回答第 46 題至第 50 題：

Stop motion involves physically manipulating objects, making them appear to move on their own. The objects are moved in tediously small increments, and each tiny change in their position is photographed. When the series of pictures is played in a continuous sequence, the objects appear to move of their own free will. Because clay is a material that is particularly malleable, it is often used in films that utilize stop motion photography.

The stop motion technique was first put to use in a film called *The Humpty Dumpty Circus* in 1898. Filmmakers used acrobat and animal toys to become pioneers in this new branch of the movie industry. In the 20th century, animators brought stop motion to the masses when the original *King Kong* film hit theaters in 1933. Decades later, Disney experimented with stop motion techniques character, Mickey Mouse, in 1978. Then, in 1993, *The Nightmare Before Christmas*, produced by the delightfully dark Tim Burton, became the first widely released stop motion feature film.

Today, thanks to the Internet, entertaining stop motion films are always just a click away. One of the best the Web has to offer is *T-Shirt War*, which was made by Rhett McLaughlin and Link Neal. In the film, the two men use alternating images on their T-Shirts to push each other’s buttons. In all, it took 222 shirts to make the short video.

Stop motion techniques have also infiltrated music videos, and one of the most impressive is Oren Lavie’s “Her Morning Elegance.” It consists of 3,225 still photographs of actors on a bed, which were shot by a single overhead camera. It took four weeks of meticulous planning *to map out* the computer animated storyboard for the video before a single frame was shot.

In Taiwan, a stop motion animation video caused an online sensation. “Deadline”, a class project by Bang-yao Liu, a student at Savannah College of Art and Design, innovatively used Post-it notes. Bang-yao planned out the changing positions of over 6,000 Post-it notes for three months before beginning his four-day shoot. The moving notes tell the story of a young man dealing with a deadline as monsters, thunderstorms, and a submarine move across the wall in front of his desk. The works of Bang-yao and many other creative filmmakers show that there are no limits to this amazing method of movie making.
