eye, the process begins as the eye admits light waves, bends them at the cornea and lens, and then focuses them on the retina. At the back of each eye, nerve fibers bundle together to form optic nerves, which join and then split into two optic tracts. Some of the fibers cross so that part of the input from the right visual field goes into the left side of the brain, and vice versa. The process in the ear is carried out through sensory cells that are carried in fluid-filled canals and that are extremely sensitive to vibration. Sound that is transformed into electricity travels along nerve fibers in the auditory nerve. These fibers form a synapse with neurons that carry the messages to the auditory cortex on each side of the brain.

30. According to the author, we might call our eyes and ears "transformers" because:

- (A) They sense light and sound.
- (C) The brain can interpret the input.
- 31. In <u>line 5</u>, what does the word "them" refer to? (A) Light waves (B) Fields
- (B) They create electrical impulse.

(D) They travel from places to places.

(C) Eyes

(D) Messages

According to the passage, optic nerves eventually (A) bend (B) split (C) disappear (D) become messages (2.) A headache is more than merely a pain in the head. Sometimes neck or upper back pain may also be involved with a headache. It ranks among the most common physical complaints. Two of the most common types of headaches are migraines and tension headaches. Possible causes of migraines include blurry vision and vomiting. Another common fyce of headache is the tension headache. A person will feel tense if he or she is too anxinus about something at work, school, or at home. Besides, doing an activity repetitively in the same position for a long period of time can result in a bad headache. The neck and head muscles become tense, and the headache follows. Some methods to prevent migraines include taking deep breaths and lying down to rest in a dark room. Another method is to imagine scenes in which one feels warm and confortable. Bright of flashing lights should be avoided. For a tension headache, one can relax tired muscles with a massage or head, neck, and shoulder exercises. In order to deal with different sources of stress, experts recommend doing activities that can help release stres, such as meditation or yoga. In addition to that, soure over-the-counter medications such as aspirin might also help. However, if one has a headache and the symptoms persist over several days, one should be the best title for this articlef (A) Origins of Headaches (B) A tension headache (C) Both A and B (D) None of the above 33. According to the atticle, which of the following may prevent a headache? (A) A migraine (B) A tension headache (C) Both A and B (D) None of the above 35. According to the article, which of the following to NOT a possible cause of headache?				1

In Chinese medicine, allergies are considered a problem of the <u>wei qi</u> (pronounced "way chee"), or						
protective <u>qi</u> . This is the protective energy that circulates on the surface of the body, keeping out foreign	- /-					
substances and pathogens. When an allergen gets in far enough to cause a full-blown immune response, it means the outer protective layer needs to be strengthened.			-	ign to cause a ru	III-DIOWN IIIIIIIII	he response, it
